- <sup>1</sup> Article abstracts with full text online: Value-based software engineering: reinventing

## Barry Boehm

March 2003 **ACM SIGSOFT Software Engineering Notes**, Volume 28 Issue 2

Full text available:  pdf(487.51 KB) Additional Information: [full citation](#), [abstract](#)

The Value-Based Software Engineering (VBSE) agenda described in the preceding article has the objectives of integrating value considerations into current and emerging software engineering principles and practices, and of developing an overall framework in which they compatibly reinforce each other. In this paper, we provide a case study illustrating some of the key VBSE practices, and focusing on a particular anomaly in the monitoring and control area: the "Earned Value Management System." This ...

- ### 3 Software economics: a roadmap

Barry W. Boehm, Kevin J. Sullivan

May 2000 **Proceedings of the conference on The future of Software engineering**

Full text available:  pdf(2.58 MB)    Additional Information: [full citation](#), [references](#), [citing](#), [index terms](#)

- 4 Article abstracts with full text online: Value-based software engineering

# Barry Boehm

March 2003 **ACM SIGSOFT Software Engineering Notes**, Volume 28 Issue 2

Full text available:  pdf(383.80 KB) Additional Information: [full citation](#), [abstract](#)

Much of current software engineering practice and research is done in a value-neutral setting, in which every requirement, use case, object, and defect is treated as equally important; methods are presented and practiced as largely logical activities; and a "separation of concerns" is practiced, in which the responsibility of software engineers is confined to turning software requirements into verified code. In earlier times, when software decisions had relatively minor influences on a system's ...

### 5. The economics of information security investment

Lawrence A. Gordon, Martin P. Loeb

November 2002 **ACM Transactions on Information and System Security (TISSEC)**, Volume 5 Issue 4

Full text available:  pdf(461.31 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

This article presents an economic model that determines the optimal amount to invest to protect a given set of information. The model takes into account the vulnerability of the information to a security breach and the potential loss should such a breach occur. It is shown that for a given potential loss, a firm should not necessarily focus its investments on information sets with the highest vulnerability. Since extremely vulnerable information sets may be inordinately expensive to protect, a f ...

**Keywords:** Optimal security investment

### 6. Social Analyses of Computing: Theoretical Perspectives in Recent Empirical Research

Rob Kling

January 1980 **ACM Computing Surveys (CSUR)**, Volume 12 Issue 1

Full text available:  pdf(3.98 MB) Additional Information: [full citation](#), [references](#), [citations](#), [index terms](#)

### 7. MANAGE—an interactive simulation model for evaluating the effects of management structure on organization performance

Michael D. Sherman

December 1981 **Proceedings of the 13th conference on Winter simulation - Volume 2**

Full text available:  pdf(951.78 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

This paper reports on progress to date in developing a computerized simulation - optimization model of the general management structure of a firm. This model called MANAGE, offers a framework wherein the profit performance of a company can be simulated and assessed under a variety of structural configurations. MANAGE also incorporates certain behavioral parameters that impact upon successful communication within corporate organizations. The paper describes the general framework of the model ...

### 8. IS '97: model curriculum and guidelines for undergraduate degree programs in information systems

Gordon B. Davis, John T. Gorgone, J. Daniel Couger, David L. Feinstein, Herbert E. Longenecker

December 1997 **ACM SIGMIS Database , Guidelines for undergraduate degree programs on Model curriculum and guidelines for undergraduate degree programs in information systems**, Volume 28 Issue 1

Full text available:  pdf(7.24 MB) Additional Information: [full citation](#), [citations](#)

### 9. Competitive solutions for online financial problems

Ran El-Yaniv

March 1998 **ACM Computing Surveys (CSUR)**, Volume 30 Issue 1

Full text available:  pdf(331.62 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

This article surveys results concerning online algorithms for solving problems related to the

management of money and other assets. In particular, the survey focuses on search, replacement, and portfolio selection problems

10 Mariposa: a wide-area distributed database system

Michael Stonebraker, Paul M. Aoki, Witold Litwin, Avi Pfeffer, Adam Sah, Jeff Sidell, Carl Staelin, Andrew Yu

January 1996 **The VLDB Journal — The International Journal on Very Large Data Bases**, Volume 5 Issue 1

Full text available:  pdf(172.75 KB) Additional Information: [full citation](#), [abstract](#), [citations](#), [index terms](#)

The requirements of wide-area distributed database systems differ dramatically from those of local-area network systems. In a wide-area network (WAN) configuration, individual sites usually report to different system administrators, have different access and charging algorithms, install site-specific data type extensions, and have different constraints on servicing remote requests. Typical of the last point are production transaction environments, which are fully engaged during normal business hours ...

**Keywords:** Autonomy, Databases, Distributed systems, Economic site, Name service, Wide-area network

11 The impact of information systems on organizations and markets

Vijay Gurbaxani, Seungjin Whang

January 1991 **Communications of the ACM**, Volume 34 Issue 1

Full text available:  pdf(3.70 MB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

The adoption of information technology (IT) in organizations has been growing at a rapid pace. The use of the technology has evolved from the automation of structured processes to systems that are truly revolutionary in that they introduce change into fundamental business procedures. Indeed, it is believed that "More than being helped by computers, companies will live by them, shaping strategy and structure to fit new information technology [25]." While the importance of the relationship ...

12 Same words, different meanings: are basic IS/IT concepts our self-imposed Tower of Babel?

Steven Alter

May 2000 **Communications of the AIS**

Full text available:  pdf(349.97 KB) Additional Information: [full citation](#), [references](#), [citations](#)

13 Session 3A: markets and auctions II: An average-case budget-non-negative double auction protocol

Yuko Sakurai, Makoto Yokoo

July 2002 **Proceedings of the first international joint conference on Autonomous agents and multiagent systems: part 1**

Full text available:  pdf(561.88 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

We develop a new strategy-proof double auction protocol characterized as average-case budget-non-negative. It is well-known that there is no strategy-proof double auction protocol that satisfies Pareto efficiency, individual rationality, and budget-balance simultaneously. The existing approach is to give up Pareto efficiency or strategy-proofness by enforcing budget-balance or budget-positive as a hard constraint. We propose a new direction to slightly relax the budget-non negative condition. AI ...

**Keywords:** double auction, electronic commerce, mechanism design

**14** Top management toolbox for managing corporate IT

**15** Information systems curriculum recommendations for the 80s: undergraduate and graduate programs

Jay F. Nunamaker, J. Daniel Couger, Gordon B. Davis

November 1982 **Communications of the ACM**, Volume 25 Issue 11

Full text available:  pdf(2.20 MB)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

The recommendations of the 1972 and 1973 ACM Curriculum Committee on Information Systems programs have been influential in the development of degree programs at the bachelor's, master's, and doctoral levels. The earlier curriculum has been revised and updated based on advances in the field over the past nine years. The report discusses the continuing need for education related to the definition, analysis, design, construction, and management of information systems in organizations. The stru ...

**19 Business process, health care and service industry applications: Financial decision-making: using information generated by a discrete event simulation to evaluate real options in a research and development environment**

Jerry Flatto, L. Leslie Gardner

December 2000 **Proceedings of the 32nd conference on Winter simulation**

Full text available:  pdf(211.63 KB) Additional Information: [full citation](#), [abstract](#), [references](#)

This article examines how a discrete event simulation can be developed to evaluate the impact of real options on a research and development project. Previous work with real options has been primarily mathematically based and the approach was not transferable to actual projects. The results shown in this article indicate that simulation is a valid method to evaluate real options and that the real options do impact the net present value of a process.

**20 Pricing computer services: queueing effects**

Haim Mendelson

March 1985 **Communications of the ACM**, Volume 28 Issue 3

Full text available:  pdf(1.20 MB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

This article studies the effects of queueing delays, and users' related costs, on the management and control of computing resources. It offers a methodology for setting price, utilization, and capacity, taking into account the value of users' time, and it examines the implications of alternative control structures, determined by the financial responsibility assigned to the data processing manager.

## 24 Research Contributions: A resource-based analysis of IT sourcing

Vital Roy, Benoit A. Aubert

 June 2002 **ACM SIGMIS Database**, Volume 33 Issue 2

Full text available: pdf(287.27 KB)

 Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

This paper studies the relationships between the choice of a sourcing mode for information systems, the value of the resources used in systems development activities and the presence of those resources at a sufficient level within the firm. The objective is to better understand the factors underlying the decision to keep the development of an information system inside the firm or to entrust it to an outside partner. A sourcing model is proposed using the resource-based theory. A case study is us ...

**25** Advanced tutorials: Options pricing: using simulation for option pricing

John M. Charnes

December 2000 **Proceedings of the 32nd conference on Winter simulation**

Full text available:  pdf(76.67 KB) Additional Information: [full citation](#), [abstract](#), [references](#)

Monte Carlo simulation is a popular method for pricing financial options and other derivative securities because of the availability of powerful workstations and recent advances in applying the tool. The existence of easy-to-use software makes simulation accessible to many users who would otherwise avoid programming the algorithms necessary to value derivative securities. This paper presents examples of option pricing and variance reduction, and demonstrates their implementation with Crystal Bal ...

**26** The use of simulation in accounting: A managerial emphasis

Daniel E. O'Leary

December 1983 **Proceedings of the 15th conference on Winter Simulation - Volume 2**

Full text available:  pdf(498.33 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

This paper reviews some of the uses of simulation in accounting. The primary thrust of the paper is toward the area of managerial accounting. However, the paper also examines the use of simulation in auditing and in the public sector.

**27** Sequential patterns in information systems development: an application of a social process model

Daniel Robey, Michael Newman

January 1996 **ACM Transactions on Information Systems (TOIS)**, Volume 14 Issue 1

Full text available:  pdf(2.38 MB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

We trace the process of developing and implementing a materials management system in one company over a 15-year period. Using a process research model developed by Newman and Robey, we identify 44 events in the process and define them as either encounters or episodes. Encounters are concentrated events, such as meetings and announcements, that separate episodes, which are events of longer duration. By examining the sequence of events over the 15 years of the case, we identify a pattern of r ...

31 Workshop and conference summaries: Practitioners do good work

L. B. S. Raccoon

March 2002 **ACM SIGSOFT Software Engineering Notes**, Volume 27 Issue 2

Full text available:  pdf(808.46 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#)

I believe that software engineers have done, are doing, and will continue to do good work. Practitioners contribute to the well-being of society and add value to the economy. Working applications enable hundreds of millions of users around the world to productively do things that would otherwise be impossible. I do not claim that software engineers are perfect. Bugs seem to lurk in almost all programs. Reliable schedules and budgets remain elusive. And, software has created whole new slates of pr ...

32 Section 04: reflecting on practice: Technology choice as a first step in design: the interplay of procedural and sensemaking processes

Mark Bergman, Gloria Mark

June 2002 **Proceedings of the conference on Designing interactive systems: processes, practices, methods, and techniques**

Full text available:  pdf(1.27 MB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Project design involves an initial selection of technologies, which has strong consequences for later stages of design. In this paper we describe an ethnographic-based field work study of a complex organization, and how it addressed the issue of front-end project and technology selection. Formal procedures were designed for the organization to perform repeatable, definable, and measurable actions. Yet, formal procedures obscured much about the processes actually being applied in selecting techno ...

35 The economics of designing generalized software

Frank Milne, Ron Weber

August 1983 **Communications of the ACM**, Volume 26 Issue 8

Full text available:  pdf(913.42 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

The choice of the attributes to be incorporated in a generalized software package is a complex design task, much like the choice of the characteristics of the basic model and the options to be offered when a new automobile is being designed. Some empirical evidence available suggests that the choices made by generalized software designers are not always well founded; for example, some functions included in the software are hardly, if ever, used, while functions that would be used ex ...

36 Value conflicts in the deployment of computing applications

Rob Kling

January 1984 **Proceedings of the ACM 12th annual computer science conference on SIGCSE symposium**

Full text available:  pdf(1.66 MB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Computing technologies importantly affect the social climate of the organizations into which they are introduced. Widespread computing developments are rarely socially neutral, since they absorb scarce resources, and re-allocate them by limiting access to the data, equipment, expertise, and other resources they utilize. This paper examines the value conflicts engendered by computing developments in two different institutional settings: electronic funds transfer systems and instru ...

37 Fifty years of progress in software engineering

L. B. S. Raccoon

January 1997 **ACM SIGSOFT Software Engineering Notes**, Volume 22 Issue 1

Full text available:  pdf(2.24 MB) Additional Information: [full citation](#), [abstract](#), [index terms](#)

In this paper, I describe a new outlook on the history of Software Engineering. I portray large-scale structures within Software Engineering to give a better understanding of the flow of history. I use these large-scale structures to reveal the steady, ongoing evolution of concepts, and show how they relate to the myriad whorls and eddies of change. I also have four smaller, more specific purposes in writing this paper. First, I want to point out that old ideas do not die. In The Mythical Man-Mon ...

**38** Equilibrium bandwidth and buffer allocations for elastic traffics

Steven H. Low

June 2000 **IEEE/ACM Transactions on Networking (TON)**, Volume 8 Issue 3Full text available:  pdf(339.27 KB) Additional Information: [full citation](#), [references](#), [citations](#), [index terms](#)

**Keywords:** bandwidth and buffer allocation, elastic traffic, equilibrium allocation, equilibrium pricing

**39** Area and performance tradeoffs in floating-point divide and square-root implementations

Peter Soderquist, Miriam Leeser

September 1996 **ACM Computing Surveys (CSUR)**, Volume 28 Issue 3Full text available:  pdf(700.72 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Floating-point divide and square-root operations are essential to many scientific and engineering applications, and are required in all computer systems that support the IEEE floating-point standard. Yet many current microprocessors provide only weak support for these operations. The latency and throughput of division are typically far inferior to those of floating-point addition and multiplication, and square-root performance is often even lower. This article argues the case for high-perf ...

**40** Decision process simulation models of defense contractor behavior

Kalman J. Cohen, Arie Y. Lewin, Richard C. Morey

December 1979 **Proceedings of the 11th conference on Winter simulation - Volume 1**Full text available:  pdf(698.85 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

The demand for defense systems is determined by a single buyer - the U.S. Department of Defense. In such an environment traditional competitive market mechanisms cannot be expected to operate effectively. Historically, the objective of procurement policies has been to prevent excess profits. This has resulted in bilateral contractual arrangements based on cost reimbursement, with low profits for the contractor and with the government bearing most of the risks. However, studies which have in ...

**41 [A correlated distribution simulation model for capital budgeting](#)**

Charles L. Crabtree, Lyman C. Dennis

 December 1969 **Proceedings of the third conference on Applications of simulation**

 Full text available: pdf(735.02 KB) Additional Information: [full citation](#), [abstract](#), [index terms](#)

A simulation model for the analysis of capital projects is presented. A mechanism included in the model for approximating dependencies between variables is described and the effects of the mechanism's operation are analyzed and documented.

**42 [Design technology productivity in the DSM era \(invited talk\)](#)**

Andrew B. Kahng

 January 2001 **Proceedings of the 2001 conference on Asia South Pacific design automation**

 Full text available: pdf(126.72 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Future requirements for design technology are always uncertain due to changes in process technology, system implementation platforms, and applications markets. To correctly identify the design technology need, and to deliver this technology at the right time, the design technology community - commercial vendors, captive CAD organizations, and academic researchers - must focus on improving design technology time-to-market and quality-of-result. Put another way, we must address the well-known ...

**44 [Session 7A: bidding and bargaining agents II: Strategic sequential bidding in auctions using dynamic programming](#)**

Gerald Tesauro, Jonathan L. Bredin

 July 2002 **Proceedings of the first international joint conference on Autonomous agents and multiagent systems: part 2**

 Full text available: pdf(162.84 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

We develop a general framework in which real-time Dynamic Programming (DP) can be used to formulate agent bidding strategies in a broad class of auctions characterized by sequential bidding and continuous clearing. In this framework, states are represented primarily by an agent's holdings, and transition probabilities are estimated from the market event history, along the lines of the "belief function" approach of Gjerstad and Dickhaut [7]. We use the belief function, combined with a forecast of ...

A. B. Kahng, J. Lach, W. H. Mangione-Smith, S. Mantik, I. L. Markov, M. Potkonjak, P. Tucker, H. Wang, G. Wolfe

May 1998 **Proceedings of the 35th annual conference on Design automation - Volume 00**Full text available:  pdf(243.93 KB)Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#) Publisher Site

Digital system designs are the product of valuable effort and know-how. Their embodiments, from software and HDL program down to device-level netlist and mask data, represent carefully guarded intellectual property (IP). Hence, design methodologies based on IP reuse require new mechanisms to protect the rights of IP producers and owners. This paper establishes principles of watermarking-based IP protection, where a watermark is a mechanism for identificatio ...

**Keywords:** intellectual property test, system-on-chip test, testing embedded core**57** Ada's impact: a quantitative assessment

Donald J. Reifer

December 1987 **Proceedings of the 1987 annual ACM SIGAda international conference on Ada**Full text available:  pdf(1.17 MB)Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

This paper reports an update to the results of its one year study conducted by RCI in 1986 for five of its clients to determine the impact of Ada™ on software cost, productivity and quality. The paper begins by discussing the study's goals and the approach used to realize them. It then summarizes the actual experience over 41 projects which delivered over 15 million lines of Ada™ code for a variety of applications, mostly real-time. It presents facts and figures drawn from a det ...

**58** From formal models to formally based methods: an industrial experience

Emanuele Ciapessoni, Piergiorgio Mirandola, Alberto Coen-Porisini, Dino Mandrioli, Angelo Morzenti

January 1999 **ACM Transactions on Software Engineering and Methodology (TOSEM)**, Volume 8 Issue 1Full text available:  pdf(239.61 KB)Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

We address the problem of increasing the impact of formal methods in the practice of industrial computer applications. We summarize the reasons why formal methods so far did not gain widespread use within the industrial environment despite several promising experiences. We suggest an evolutionary rather than revolutionary attitude in the introduction of formal methods in the practice of industrial applications, and we report on our long-standing experience which involves an academic institut ...

Jonathan Bredin, David Kotz, Daniela Rus

May 1998 **Proceedings of the second international conference on Autonomous agents**

Full text available:  pdf(1.11 MB) Additional Information: [full citation](#), [references](#), [citations](#), [index terms](#)

60 On the quantification of e-business capacity

Moises Goldszmidt, Derek Palma, Bikash Sabata

October 2001 **Proceedings of the 3rd ACM conference on Electronic Commerce**

Full text available:  pdf(1.13 MB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

In order for current e-Businesses to mature from hastily assembled systems and applications, formal processes must be put in place for planning and budgeting, pricing and costing, and for establishing quality of service and service--level assurances. There are many challenges that e-Businesses face in formalizing these processes. The most important problem is to bridge the semantic disconnect between business objectives and the information system performance objectives. Next, the characterizatio ...
